

Upgrade guide from DSL-320T to DSL-320T@524T firmware (Annex A)

First step: connect to the page 192.168.1.1 with your browser web (I hope firefox).

After, go to the page "Tools" -> "System Settings":

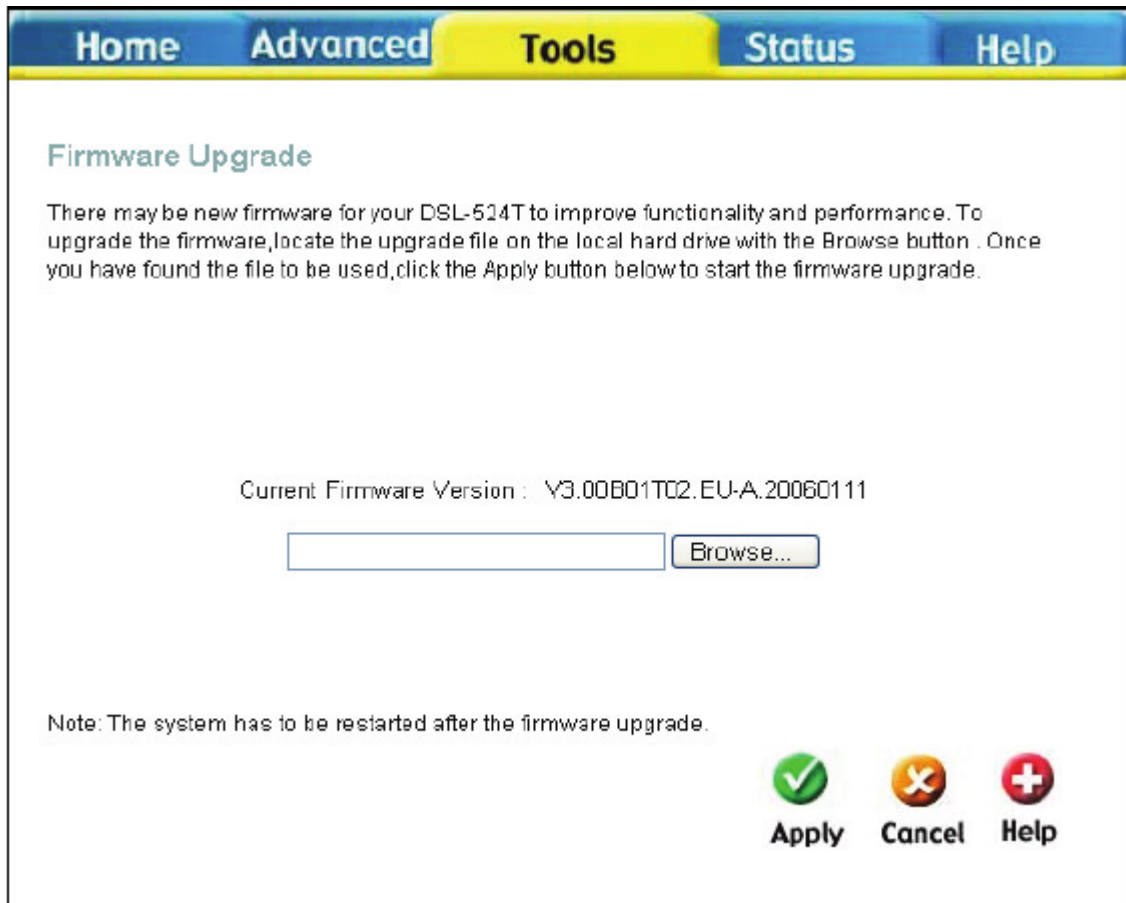

The screenshot shows the 'System Settings' page of a web interface. At the top, there is a navigation bar with five tabs: 'Home', 'Advanced', 'Tools' (which is highlighted in yellow), 'Status', and 'Help'. Below the navigation bar, the page title 'System Settings' is displayed. A paragraph states: 'The current system settings can be saved as a file onto the local hard drive.' There are two main sections: 'Save Settings To Local Hard Drive' with a 'Save' button, and 'Load Settings From Local Hard Drive' which includes a text input field, a 'Browse...' button, and a 'Load' button. A note below these sections says: 'Note: The system has to be restarted after the configuration is restored.' Further down, there is a section 'Save Settings and Reboot the System.' with a 'Save and Reboot' button, and a section 'Restore To Factory Default Settings' with a 'Restore' button. In the bottom right corner, there is a red circular icon with a white plus sign and the word 'Help' below it.

Click on the "Browse" button. Choose the file "config-DSL320T@524T-Submax.bin" and click on the "Load" button.

(The old configuration that have saved from your original 320T is not compatible and should be remaked alone after that to have loaded the default config stocked with my modified firmware.)

Now you will be able to complete also the last step, therefore go to the page "Tools" -> "Firmware Upgrade" and therefore you will see this:

Home Advanced **Tools** Status Help

Firmware Upgrade

There may be new firmware for your DSL-524T to improve functionality and performance. To upgrade the firmware, locate the upgrade file on the local hard drive with the Browse button. Once you have found the file to be used, click the Apply button below to start the firmware upgrade.

Current Firmware Version : V3.00B01T02.EU-A.20060111

Browse...

Note: The system has to be restarted after the firmware upgrade.

 **Apply**  **Cancel**  **Help**

Click "Browse", chose the file "firmware-DSL320T@524T-Submax.bin" saved on your hardisk and wait the end of the update.

At this point, the update process is concluded. Now ERASE the CACHE of the browser and the game is done!

Now CONFIGURE your router with the correct settings for your ISP ;)

The End

by Submax ;)
